

Benarx FWH 30-60-120

When using welding tents, the safety of both personnel and equipment is taken care of as the hot work can be executed without closing down the entire plant. However, there has been a restriction where welding tents could not be in use when there has been danger of Jet Fire nearby. The Benarx FWH 30-60-120 solves this problem, acting like a Jet-Fire proof shield between the potential danger and the welding tent, saving large costs as it enables the use of welding tents in, until now, impossible locations.

Benarx Fire Protection Wall for Welding Tent 30-60-120

- Enables use of welding tent also in places with danger of jetfire
- Protects the welding tent against jetfire
- Reduces risks of damage of both personnel and welding tent
- Benarx's unique technology features patented glued joints
- Produced in standardised sections, which can easily be built together to the necessary size of the wall.
- Very easy installation
- Outer lining made of silicone-impregnated cloth
- Water tight

Product Overview

Fire Protection Walls are made for protecting a welding tent towards eventual danger from Jet Fire. The wall is 100% watertight and advancements in technology have produced an outstandingly durable product. It is fastened with velcro and stel bands, and can be mounted and demounted quickly. The elements are covered with an impregnated silicone covering.

Durable

Fire Protection Walls demonstrate proven durability at the construction stage and in a harsh offshore environment.

Very Simple Installation

Due to the standardized size of the elements the Fire Protection Walls is easy to mount and build together to the necessary size. Each time the same elements can be built into new shapes if desired.

Fire Protection Wall Performance

Property	Value	Method
Withstands Jet-fire		Jet fire-tested according to NORSOK Standard R-004
